

Digital Retinal Imaging

We, at Macadam Vision, are proud to provide our patients with a highly advanced Digital Retinal Imaging Service, which scans the retina to rule out or screen for eye diseases and dramatically improve our ability to view your retinal health.

EARLY DETECTION OF EYE DISEASE IS CRUCIAL

The doctors recommend most patients have Digital Retinal Imaging once a year so we can view and record your retina at up to hundreds of times normal size.

With this service you can expect:

- An annual eye wellness screening scanning image and photograph
- An in depth view of the retinal surface and below the retinal surface.
- A discussion with you and the doctor regarding the images
- A permanent record for your medical file, for year to year comparison and diagnosis
- A quick, easy, comfortable experience
- Typically no dilation drops
- The ability to e-mail images to you or others in the future
- This technology allows the doctors to fully screen for and evaluate retinal problems such as macular degeneration, glaucoma, retinal holes, detachments and diabetic retinopathy all of which can lead to partial loss of vision or blindness. Also systemic diseases such as diabetes and high blood pressure can be detected during a retinal exam.

Insurance is designed to cover a basic exam only. It does not cover advanced procedures such as Digital Retinal Imaging. Our doctors recommend this service to our patients at only \$39.00 additional charge.

I am a Diabetic (Standard of practice is to be dilated and have a Digital Retinal Photo. Diabetics will be dilated and are highly recommended to get Imaging.

I will have my retinal health evaluated with Digital Retinal Imaging and Photography

I DO NOT wish to have Digital Retinal Photography. I choose instead to have a dilated retinal exam. Side effects will include blurred vision and light sensitivity and may include headache. Symptoms may last typically 4 hours and rarely 36 hours.
